Passionate and creative **Front-end**

Developer. I am self-taught with an

aptitude for problem solving and a need to create.

I have good experience integrating front-end and back-end codebases, and I love to bring designs to life to make a great user experience.

After five years of experience in different Hotels as Receptionist, I am excited and fully prepared to make my passion for web development a full time job.

PROJECTS

Photographer CMS

A fully responsive, full-stack Content Management System built with the MERN stack. The user can manage images with CRUD's operations, and modify the website look through an admin panel accessible via user authentication

This app features:

- Flexible and easy Control Panel to manage the website.
- Images are uploaded in Cloudinary CDN
- Login System with JWT to access the Admin control panel
- Drag and drop system to upload multiple images at a time

Invoice App

A full-stack MERN application with Typescript to manage Invoices. Invoice App helps the user to manage and order the invoices with a modern and clear User Interface. Concerning the design, I followed a professional mockup.

This app features:

- Filter invoices by status and order by expiring date
- CRUD operations for invoices
- Javascript form validation
- Light and Dark themes
